

Wheelchair

Abstract of the Disclosure

- 5 The wheel comprises a rim member 20, a hub member 22 which is connected to the center of the rim member via the wheel 21 and rotatably connected to a chair part 1. The wheel 2 fixes a cushion ring 26 on the outer periphery of the rim member 20, and has a continuous wall portion 31 on outside of the outer periphery. This continuous wall portion 31 is shaped in ring form along the rim member 20, and provides a grip ring 27 on the edge
- 10 portion. The wheelchair forms a finger-holding cavity 32 by the continuous wall portion 31.
